DETAILED ACTION

Election/Restrictions

1. Claims 12-14 & 21 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse. Pending claims to be examined are claims 1-11 & 15-20.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

A) Claims 1-11 are indefinite because it is unclear as to whether the compounds which react with non ionic reactive groups to produce covalent bondings are the same compounds which form electrostatic bondings with ionic reactive groups.

Art Unit: 1637

B) In claims 1-11 & 15-20 the preamble states blocking but the active steps do not appear to reflect such an intended use. The active steps should reflect the preamble e.g. thereby blocking the device.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 15,16,17,19 & 20 are rejected under 35 U.S.C. 102(e) as being anticipated by Bardhan et al (US2002/0142339 Oct. 3, 2002).

Bardhand et al teach blocking a detection device of biochemically active molecules (see whole doc. esp. abstract). They teach bringing solution with succinic anhydride, anionic dendrimers, polyglutamic acid, polyacrylic acid or heparin to a substrate with probe DNA. The compounds would confer a net negative charge to the surface to reduce background signal either by electrostatic or steric repulsion (see paragraph 0022). They teach washing with SSC and SDS solution (see paragraph 0023). The cationic layer is bound to porous silica.

SUMMARY

4. Claims 1-11 & 18 are free of the prior art but are rejected under 112 second paragraph. There is no prior art that teach or suggest both using bringing in the presence of detection device having probe molecules, ionic reactive groups and non ionic reactive groups into compounds which react with non ionic reactive groups to produce covalent bondings and compounds which form electrostatic bondings in conduction with ionic reactive groups, washing thereby blocking. Concerning claim 18 there is no prior art that teach or suggest that ionic reactive groups are amino groups and compounds which form electrostatic bondings in conduction with ionic reactive groups are dextran sulfates. The closest prior art is MacBeath et al (US2002/0102617 August 1, 2002) who teach of using BSA or dextrans to block generally (see paragraph 0048) but do not teach or suggest compounds to block by ionic and covalent bond interaction.
